Technology:

Proficiency:

-Microsoft Word, PowerPoint, Excel, Webpage Design, Google Drive, Infinite Campus, Digital movies, Flip Video, iMovie, iPhoto, Macintosh OS X, Digital video editing, Powerteacher, Web 2.0, Edmodo, Google Classroom, Edmodo, and Schoology.

Philosophy:

-Technology should be used to enhance student learning and provide students with new ways to express learning and understanding of content. Technology should be used to allow teachers to deliver content to students of different learning styles. Though using these strategies students will master skills necessary to be successful in the 21st century classroom and in the 21st century job market and work world.

Philosophy of Education:

I believe education is a process that never ends, regardless of one's age. It continues throughout one's lifespan and occurs in a variety of environments. I believe education encompasses learning about the world and the society that one lives in. Through increasing awareness of one's surroundings it becomes possible to lead a more enriched and productive life as a citizen, student, and member of the human race. One of the goals and purposes of education is to enhance communication of our ideas and thoughts with those around us. I believe that education is the fundamental way social ideas, progress, and social reform occurs. Society uses the school setting as the means to reinforce new ideas, old ideas, and beliefs. School is the root from which these changes occur and makes us who we are today.
